

WHAT IS CLAIMED IS:

- 5 1. A catheter comprising:
 an elongated catheter body having a proximal end, a distal end and at
least one lumen extending longitudinally therethrough;
 a control handle attached to the proximal end of the catheter body;
 a mapping assembly mounted at a junction at the distal end of the
catheter body and comprising at least two elongated flexible spines, each spine
10 having a proximal end attached at or near the distal end of the catheter body and
a free distal end, wherein each spine carries at least one electrode along its
length; and
 at least two spine puller wires, each spine puller wire corresponding to one
of the at least two spines, wherein each spine puller wire has a proximal end
15 anchored in the handle and a distal end anchored at or near the distal end of its
corresponding spine such that, in use, longitudinal movement of a spine puller
wire relative to the catheter body results in deflection of the spine to which the
spine puller wire is anchored.
- 20 2. The catheter of claim 1, wherein each spine comprises a tip
electrode mounted at the distal end of the spine.
3. The catheter of claim 1, wherein each spine comprises an
atraumatic tip mounted at the distal end of the spine.
- 25 4. The catheter of claim 1, wherein each spine comprises a plastic cap
mounted at the distal end of the spine.
5. The catheter of claim 1, wherein each spine further comprises at
30 least one location sensor.
6. The catheter of claim 1, wherein the number of spines ranges from
two to twelve.

7. The catheter of claim 1, wherein the number of spines ranges from three to eight.

5 8. The catheter of claim 1, wherein the catheter further comprises a catheter puller wire having a proximal end anchored in the control handle and a distal end anchored at or near the junction of the mapping assembly and the catheter body such that, in use, longitudinal movement of the catheter puller wire relative to the catheter body results in deflection of the catheter body at or near the junction.

10 9. The catheter of claim 1, wherein each electrode has a length up to about 2 mm.

15 10. The catheter of claim 1, wherein each spine carries a plurality of electrodes, and the distance between electrodes on each spine ranges from about 1 mm to about 10 mm.

20 11. The catheter of claim 10, wherein the distance between electrodes on each spine ranges from about 2 mm to about 5 mm.

25 12. The catheter of claim 1, wherein each spine carries from 2 to about 20 electrodes.

30 13. The catheter of claim 1, wherein each spine carries from 3 to 10 electrodes.
